ABOUT

An architect who works with their hands, too

Born 2 March 1994 · Graduate in Architectural Engineering, Islamic Azad University (Dolatabad Branch), Isfahan, 1395 SH (2016–17)

My professional work in interior decoration and woodworking began in the years after graduation. Designing, building and installing wood and MDF pieces gradually grew into a specialty: designing and delivering kindergartens and children's play houses.

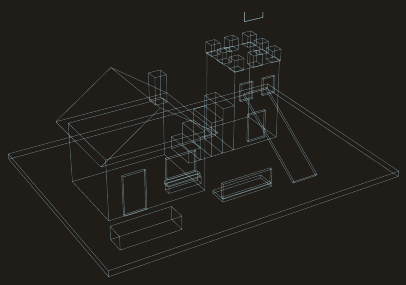

Combining architectural knowledge with hands-on skill — present at every stage, from first concept and technical drawings to fabrication, installation and final detailing — makes it possible to offer solutions that fit each client's needs and each space.

Hands-on experience designing and building role-play job huts, multi-level play structures, children's interiors, custom furniture, green walls and landscaping, flower boxes and benches, metal structures, lighting installation, and the design, fabrication and installation of decorative logos.

Design | Technical drawing | Build & install

PROCESS

From idea to a space you can actually live in

01 · Idea & site analysis

Studying the limits of the space — a low ceiling, an existing layout — and the client's needs; concept and first sketches.

03 · CNC cutting

Preparing cut files, then coordinating and ordering the cutting on the right material from CNC service providers.

05 · Finish & install

Painting, lighting, on-site installation and final details — with children's safety in mind.

01 Idea & site analysis | 02 Technical drawings | 03 CNC cutting | 04 Build & assembly | 05 Finish & install

SERVICES

Everything a children's space needs

Children's space decor
- Interior decor for kindergartens and play houses
- Role-play job huts and play houses
- Multi-level play structures (MDF + steel frame)
- Decorative walls, entrances, reception and office
- Decorative flooring and wall cladding

Outdoor spaces
- Green walls
- Decorative planters with protective guards
- Custom flower boxes and benches
- Functional and decorative yard elements

Woodwork & custom pieces
- MDF and wood pieces, built and installed
- Custom furniture and fixtures
- Wardrobes, shoe racks, shelves, benches
- Veneers, decorative detail and finishing

Metal structures & technical work
- Helping build steel frames for play structures
- Cutting, assembling and fitting metal parts
- Basic-level welding
- MDF cladding over structures, with final detailing

Lighting & decorative fixtures
- Installing lights and lighting fixtures
- Installing brackets and mounting supports
- Matching the lighting to the interior design

Technical design & preparation
- Technical drawings in AutoCAD
- Dimensioning and preparing designs for fabrication
- CNC cut files and coordination with cutting service providers
- Solutions tailored to each space's constraints

Logos & decorative lettering
- Logo and lettering matched to brand identity
- CNC cutting on suitable material
- Painting and finishing the parts
- Wall installation for kindergartens and commercial spaces

Cabinets & MDF units
- Building and installing cabinets and units
- Repairing and refurbishing old cabinets
- Replacing hinges, drawer runners and hardware
- On-site fixes, finishing and painting

"The goal is to create spaces that, beyond being beautiful, are functional, fit their surroundings and work in real life."

Attention to detail | Creative design | Hands-on material knowledge | Solving build problems | Quality results
